

AQUAKAT®

Tap water turns into spring water

AquaKat® is a Swiss-made device which brings new life to tap water and which functions without filter, without electricity and without maintenance for more than 15 years.

By the action of AquaKat®, tap water acquires a better taste and becomes more refreshing to drink. Otherwise its dissolution capacity increases, which substantially reduces the problems of scale and rust deposits. A healthy and revitalized water like spring water for daily use (shower, kitchen ...), it means better health and a natural sweetness found for your skin, your hair and your linen, dishwasher, industrial baths) stay longer in good condition and with less risk of breakdowns.

Technology: Molecular Resonance

The AquaKat® functions as a catalyst, emitting signals that, by resonance effect, will improve the molecular structure of the water. Thanks to a particular manufacturing process, the AquaKat® accumulates the natural water and oxygen water frequencies and then transmits them to the tap water, thus making it acquire the typical characteristics of

The AquaKat® comes in several models, from the smallest, which attaches directly to the faucet, to the larger one that can adapt, to the larger pipes. In all cases, the water is instantly vitalized.

Also Useful in agriculture

The AquaKat® dairy farmers found a better success rate for artificial inseminations, a drop in cell count and an improvement in the average amount of milk produced per day (about 3%). Poultry farmers are also seeing a drop of about 3% in broken / fragile shells. Diarrhea is also less common in pigs and feeder cattle.

A water vitalized by AquaKat makes it possible to cook, among others, a bread of better quality: better aspect, better taste, and better life. Ideal for hotels and restaurants.

a water of source. This results in a modified crystallization behaviour (lime scale detachment), an increased absorption capacity (dissolution behaviour) and a better taste.

Eco-friendly and sustainable

The operation of AquaKat® displays a zero carbon balance, limits the plastic and generates no magnetic or electromagnetic field. The equipment does not come into contact with the water and therefore requires no maintenance. The product is also compliant with ISO 9001 and ISO 22000 standards. More and more architects and developers are equipping their collective buildings with the AquaKat® to meet the demands of residents' ecological quality of life.

An ultra-simple installation

The AquaKat® is in the form of a stainless steel cylinder. It consists of two elements: a special steel case of type V2A, and a loaded internal part. It can be easily attached to all types of piping, directly to the kitchen and bathroom faucets or behind the washing machine. Smaller models are particularly recommended when traveling, at the hotel or in a camper. No need to touch the existing piping, the AquaKat® attaches in one click and has an immediate effect.

The AquaKat® is available in different models corresponding to different volumes of water to be treated per day and at different lengths of pipes. The device is suitable both for domestic use (apartment, house, residential building) for industrial, agricultural, commercial or public (nurseries, hospitals, schools...). Effective for hot and cold water, the equipment is also suitable for heating loops, heated floors, cooling towers, steam humidifiers and industrial processes.

1 % of turnover donated to NGOs.

After three months of use, the line equipped with an AquaKat (left) has almost no trace of limestone, unlike the pipe without AquaKat.

A model for each use

For a better quality of life, for better health, for a better kitchen, to save money. Without filter, without electricity, without maintenance.

AquaKat-S (120 € with VAT - 100l per day)

- Directly on the faucet,
- While camping, traveling,
- Vitalization of water after reverse osmosis or filtering.

AquaKat-M (390 € with VAT - 750l par jour - 20 m of pipelines)

- Cold or hot water pipes,
- Solar installations,
- Floor heating.

AquaKat-L (840 € with VAT - 3000l per day - 80 m of pipelines)

- Habitation
- Agriculture
- Industry

Discover our large models XL, XXL, 8+ for industry, swimming pools, greenhouses, real estate and agriculture.

Duration of use over 15 years. 5 years warranty.

The AquaKat® S can simply be attached to the kitchen, sink or shower faucet.
