- Homes
- Agriculture
- Industry

Discover also the large models XL, XXL and, 8+ for industry, housing and agriculture.

Red line : Disorderly molecular structure  
Blue Curve : Orderly molecular structure

### AquaKat Structure

Stainless steel case V.A  
Internal part loaded  
Material of filling

### The AquaKat®

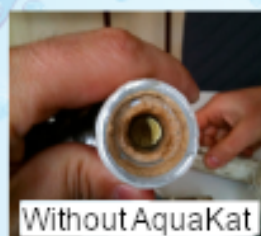

is an device for physical vitalization of water, which works as a signal emitter (catalyst).

#### How does AquaKat® work?

The AquaKat transmits internally imprinted frequencies to the water; this causes the running water to vibrate and improves its molecular structure in a way that makes it acquire the typical characteristics of spring water.

#### Ultra-simple installation

The AquaKat can be installed on all types of pipes, directly in the kitchen, the bathroom or behind the washing machine. The small models are especially recommended for travel, in your hotel room or in your camping car.

5 years  
guarantee on  
manufacturing and  
material.
